

| FENNO EXHAUST SYSTEMS |

Enduring extreme conditions

Cold, heat, sludge, salt, dirt and humidity put a great strain on exhausts. Few exhaust pipes last long under a car. But Fenno does not give in. Fenno exhausts are solid Finnish products of high quality – which is why they have a longer life span than others.

Testing and production

The most important property of Fenno products is quality. We test our products continuously in our own test laboratory, not to keep the quality unchanged but to further develop it. Producing high-quality products is made possible by first-rate raw materials, but it takes meticulous and skilful expertise to make an exhaust pipe a Fenno exhaust.

Careful planning and R & D result in high quality

Continuous product development keeps our product selection up to date and guarantees flexible service. Our test track and testing laboratory produce valuable information quickly. It also enables quick product launch and speeds up the EU approval process.

Fenno mufflers are manufactured in accordance with EU directives. They correspond fully to both sound and counterpressure levels of genuine parts. Mufflers sold within the EU must be e-approved. A product manufactured and e-approved in Finland is marked with "e-17". Fenno exhaust pipes have two years guarantee.

Exhaust pipe is an outcome of a multi-stage production process

In addition to exhaust systems, our selection includes thin-wall tubes with different profiles and dimensions. Therefore, even the first stage of manufacture – pipe production – is in our own hands and, thus, under our own strict quality control.

Expertise in assembly and, in particular, welding are prerequisites for high-quality corrosion resistance throughout the complete pipe system. This is why we assemble Fenno exhausts in only Parkano - nowhere else. The flexible parts of exhaust pipes are also of genuine quality and equipped with steel braiding both on the inside and on the outside.

Structure

Fenno muffler

equals an original part for both sound and counterpressure levels.

Al-Zn

Galvanized metal sheet ensures good corrosion resistance properties even in the extremely demanding climate conditions of Finland.

Absorption material

is recyclable Biosil® mineral wool.

Inner parts of the muffler

are also made of galvanized metal sheet, which improves the life of a muffler considerably.

Guarantee

Fenno exhaust systems have two years guarantee

Easy to install

Dimensional accuracy guarantees easy and fast installation of the exhaust system.

Welded seams

are protected with aluminium paint, which improves their corrosion resistance substantially.

Stylish finishing

with, e.g., chrome plated heads.

References

We produce exhaust systems for virtually all car makes and models. Our product development has designed the exhaust systems with utmost accuracy, eliminating laborious adjustments.

Specializing ensures quality and availability

We manufacture exhaust systems for a wide variety of cars; however, we have specialized in Japanese and European saloon cars, vans and MPVs. That is why we are able to deliver a selection of products either directly from our warehouse or on a very tight production schedule.

FennoSteel

FennoSteel is a significant manufacturer of exhaust pipes. Our clients include car sellers and wholesalers for car accessories. Our main marketing areas are the Scandinavian countries, EU countries, other European countries and Russia.

Our products meet the highest standards. The only constant factor in our business is quality. Continuous product development guarantees that all changes result in better quality.

Certifications

The product development, manufacture and distribution of FennoSteel Oy are ISO 9001 certified. The certification was granted by the internationally recognized foundation Det Norske Veritas.

FennoSteel complies with the regulations of the environmental certificate ISO 14001. All materials that we use are recyclable.

FennoSteel has also been awarded the Key Flag label for high domestic content of manufacture.
